# Overall Vision and Strategy

Overall objective is the emergence of Embedded Systems Design as a scientific discipline. This objective is pursued within the international scientific and industrial community.

*This is implemented in 3 levels:*

- **International Collaboration**

- High-level meetings (NSF/IST),
- International Schools  
(eg: European school, China school, SouthAmerican school),
- support for selected conferences (eg: Embedded Systems Week)

- **European level**

- Direct organisation of top workshops and schools
- Support for existing workshops, Artist and other schools  
(eg: FOSAD) and conferences (eg: DATE)
- Industrial Liaison  
(ARTEMIS, triggering projects and promoting standards)

- **Affiliated Partners**

- Direct involvement in the workprogramme (technical meetings).

The Artist2 Network of Excellence has always pursued an extremely active policy for organizing and funding International Collaboration events:

In Year 4 alone, we have had a very large number of International Collaboration events that we plan to pursue into the ArtistDesign NoE:

## ArtistDesign:

- **WESE'08: WS on Embedded Systems Education October 23rd, 2008 Atlanta, Georgia - USA (in ESWEEK)**

As embedded system designs grow more complex and the time to market diminishes, quality embedded systems education becomes more and more important. This fourth workshop on the subject aims to bring researchers, educators, and industrial representatives together to assess needs and share design, research, and experiences in embedded systems education.

## Artist2:

Guest Editors Alan Burns Alberto Sangiovanni-Vincentelli - UC Berkeley

## and back in Artist FP5:

- **Artist International Collaboration Days 2003 - Education October 11th 2003 – Philadelphia**

This was an open meeting to discuss important action lines in the area of Embedded Systems - in which strong synergy between international teams had the greatest benefits. Work over the first year had concentrated on discussion between top researchers in the field, summarized in white papers that were presented and discussed here.

- **Artist FP5 Guidelines for a Graduate Curriculum on Embedded (publication)**

The design of real-time embedded systems requires skills from three specific disciplines: control theory, computer science, and electronic engineering, and their combination. This often involves experts from differing backgrounds, who do not recognize that they address different issues from complementary angles.

## Artist2 PhD Schools in Y4

**Real-Time Kernels for Microcontrollers: Theory and Practice** June 23-25, 2008 Pisa

The course on Real-Time Kernels for Microcontrollers aims to introduce the basic concepts of Real-time Systems targeted to Embedded Systems, which are often implemented using microcontrollers. The course will briefly illustrate the theoretical background of real-time scheduling, resource-aware techniques, and wireless communication based upon the IEEE 802.15.4 protocol.

**ARTIST2 Graduate Course on: Automated Formal Methods for Embedded Systems 2008**

June 16-24, 2008 DTU - Lyngby, Denmark

In the lectures, we will introduce a comprehensive set of state-based models as well as automatic procedures for their analysis. The exercise classes will complement this by providing hands-on experience with appropriate verification tools.

**ARTIST2 Graduate Course on Embedded Control Systems** May 26-30, 2008 Stockholm

The course provides an account of state of the art theory and techniques that address the connection and integration of the areas of Control systems and Embedded systems.

SLA++P'08 Model-driven High-level Programming of Embedded Systems Overview

European Joint Conference on Theory And Practice of Software 2008

executable code.

SLA++P is a workshop dedicated to synchronous languages and the model-driven high-level programming of reactive and embedded systems. Firmly grounded in clean mathematical semantics, synchronous languages are receiving increasing attention in industry ever since they emerged in the 80s. Lustre, Esterel, Signal are now widely and successfully used to program real-time and safety critical applications, from nuclear power plant management layer to Airbus air flight control systems. At the same time, model-based programming is making its way in other fields of software engineering, too, often involving cycle-based synchronous paradigms.

The purpose of the SLA++P workshop is to bring together researchers and practitioners who work in the field of languages and tools for the model-driven development of embedded applications both in hardware and software. The workshop is not limited to synchronous approaches but open to other engineering design approaches with strong semantical foundations providing a way to go from a high-level description to provable

too, often involving cycle-based synchronous paradigms.

# Web Portal - Features

## Objective

The Artist2 Web Portal is a major tool for Spreading Excellence within the Embedded Systems Community.

- The web portal disseminates information about **contacts** (Artist2 core and affiliated partners), and **web links** about:
  - the Artist2 JPA events and activities,
  - a fairly thorough set of links to sites of interest to the embedded systems community
- We regularly receive spontaneous requests for:
  - adding information to the site
  - subscriptions to the Artist Newsletter and Mailing List
- Authorised users (principally, the Artist2 partners) can access the back end of the site to modify and update information directly. The changes are immediately visible on the site, which greatly streamlines the updating process.
- Ergonomics are set for the entire site. The “look and feel” of the site is always homogeneous throughout the site. It’s possible to change these ergonomics, and these changes are applied homogeneously throughout the site, via automated mechanisms

Information Society  
Technologies

# Analysis of Visits to the Web Portal

Over the course of Y4, we see a peak in April, which corresponds to registrations for the Artist Summer School.

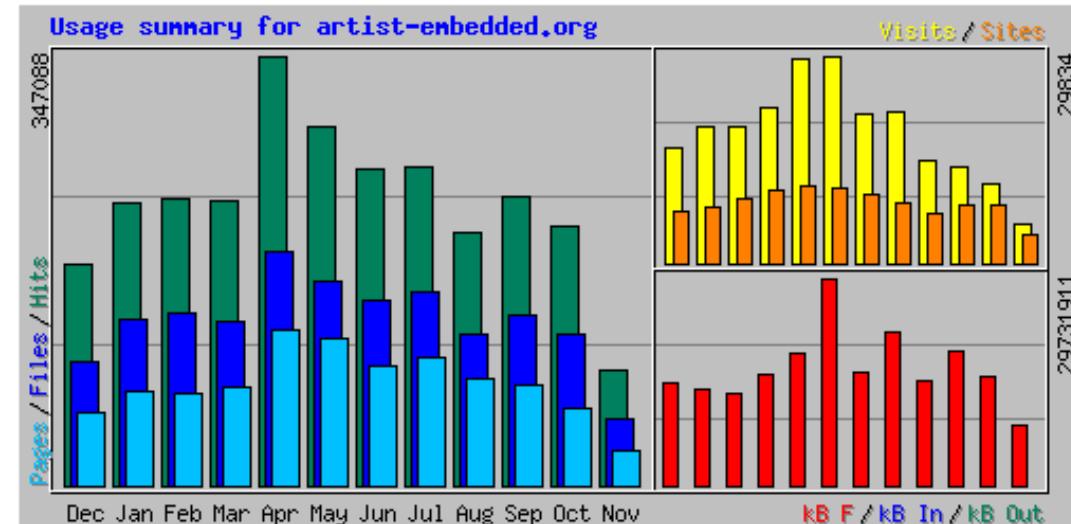

Overall, the workshops (and their hits) were more evenly distributed than in Y3.

Main conclusions:

- Visits to the site are largely driven by the Artist2 events organised (workshops, conferences, schools),
- This seems to drive visits to the other sections: “Embedded Systems Links”, and “Research and Integration”.

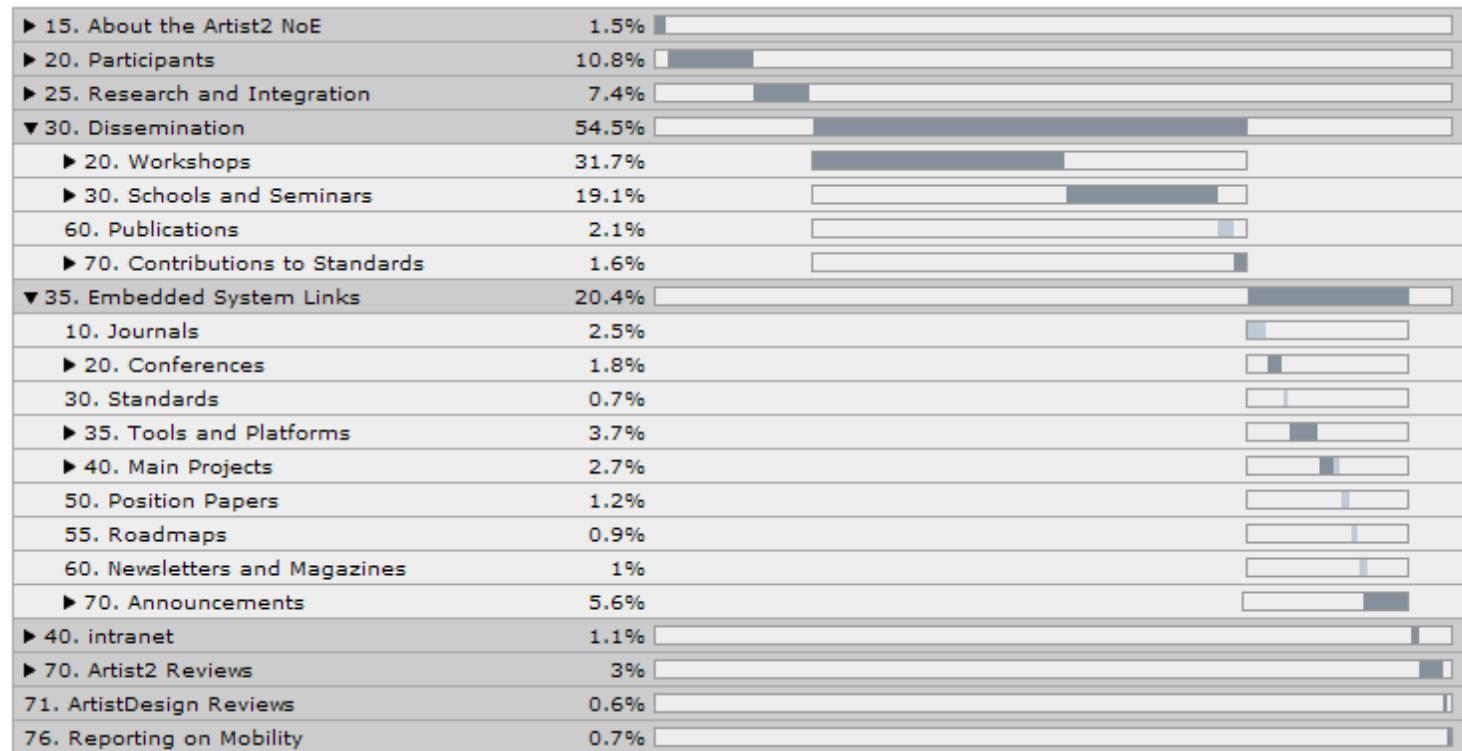

*But please note:*

- Deep analysis of the pertinence and effectivity of the web portal needs to go beyond the numerical analysis provided here.
- Real impact is in whether or not the members of the community find the information relevant, and how it helps them in their daily tasks.

# Web Portal - Statistics

Visits distribution / sections of the web portal :

- 54.5% of the visits are to the “Dissemination” section, which provides information and pointers about Artist2 events and results. This is up from 40.9% last year. Of these, a full 31.7% (30.3% last year) of the total visits to the portal are to the Workshops section, where the home pages of many Artist2 workshops are located.
- The “Schools and Seminars” section has registered a very large upswing, from 6% last year, to 19.1% this year.

# Google searches to access the Web Portal
