# Embedded System Education in Taiwan: Past and Future

Prof. Tien-Fu Chen and Prof. Shiao-Li Tsao

Dept. of Computer Science  
National Chiao Tung University

## Outline

- VLSI Circuit and Systems/SoC Education Program in Taiwan (2000-2010)
- Intelligent Electronics Education Program in Taiwan (2011-2016)
- Embedded System Education Program (2003-2010)
- 4C Electronics (4C) Education Program (2011-2016)

---

# VLSI Circuit and Systems/SoC Education Program in Taiwan (2000-2010)

## Ministry of Education

# National Program for Promoting Education in Advanced SoC Design

**2006/1/1 ~ 2000/12/31**

**total budget : 1,033,012,000 NT\$**

# Program objectives

## 1. To cultivate college students with advanced skills in SoC fields

- plan and develop advanced courses, lab modules
- organize short-term training workshop, summer schools, and teaching forum
- held various students competition to encourage

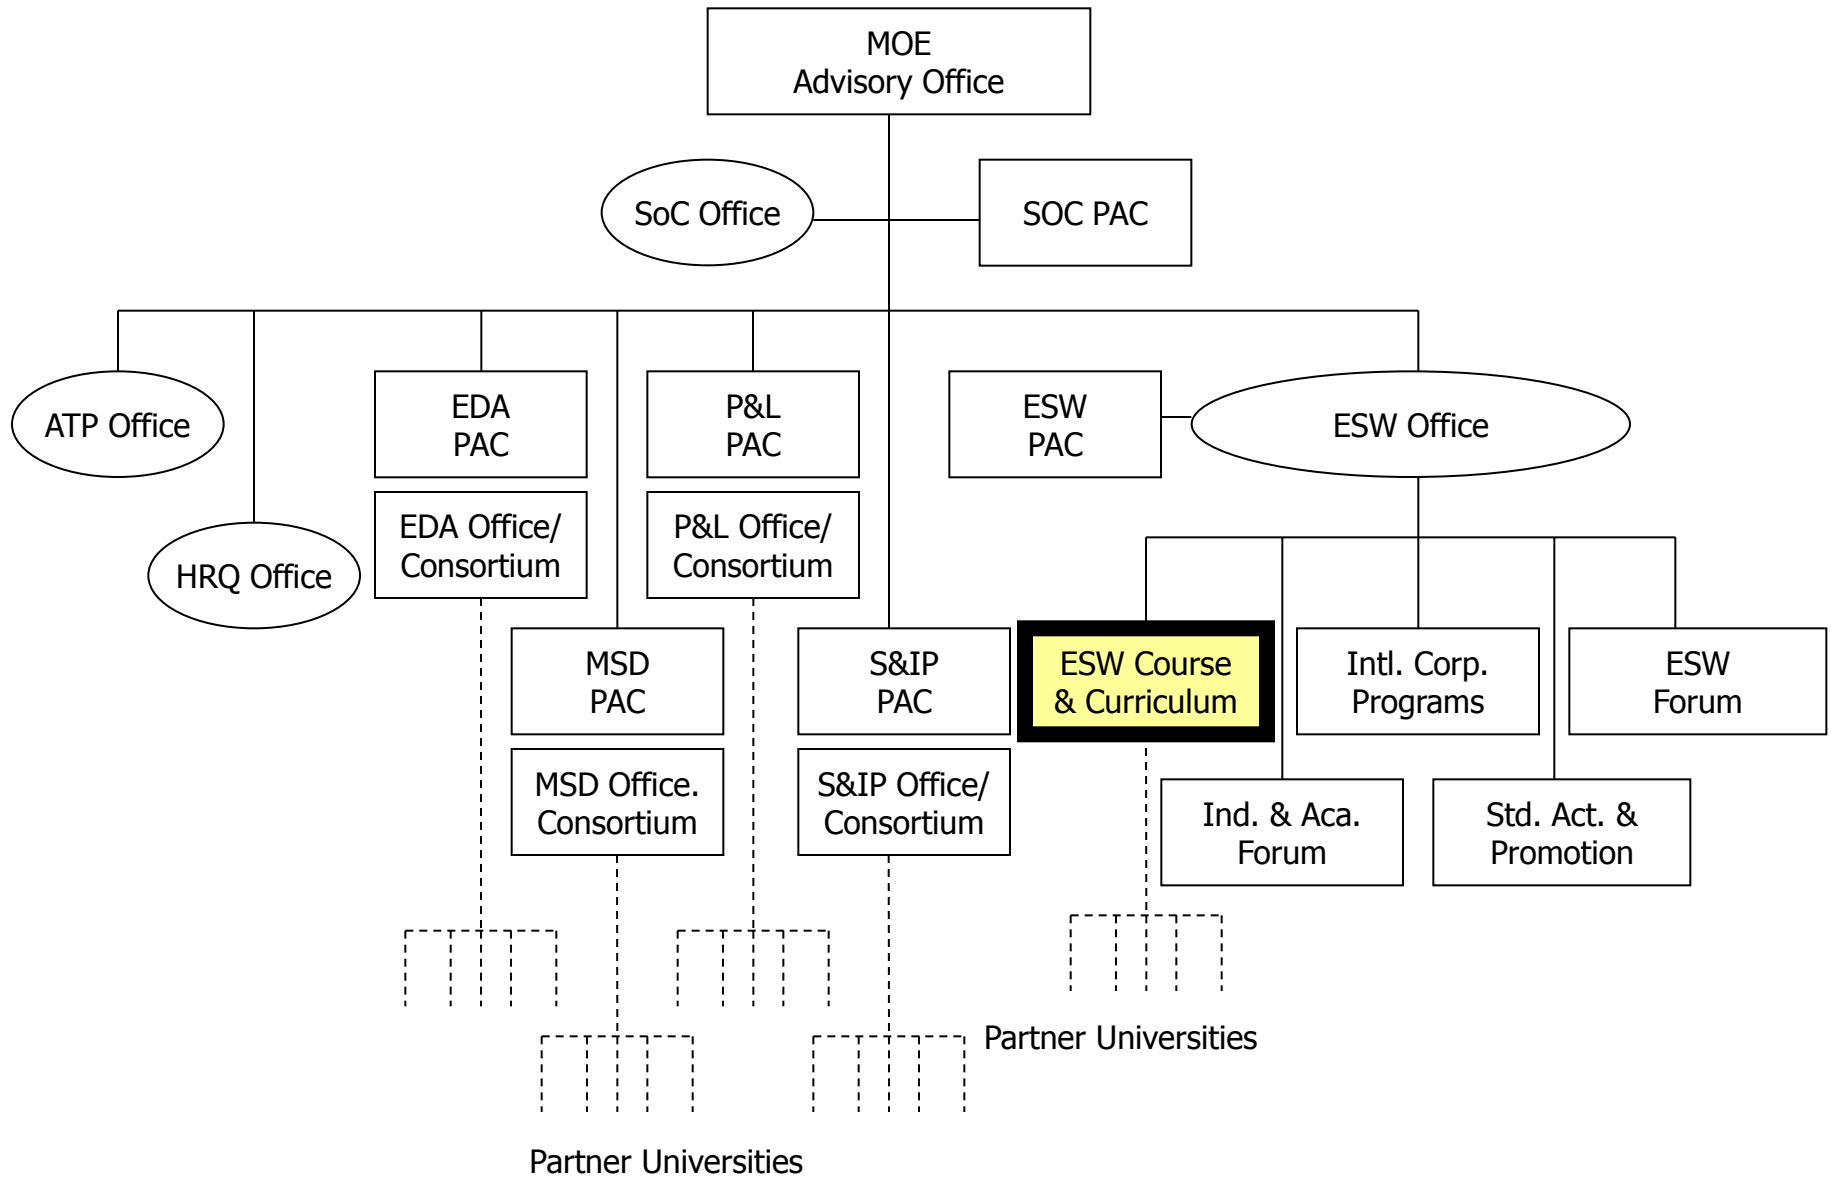

## 2. To improve students' competence in international activities

- Encourage participation in various international forum and workshop
- Reward students who can enter the final list of international competition
- Support professors to publish textbooks in English

## 3. To develop the core capability in system integration

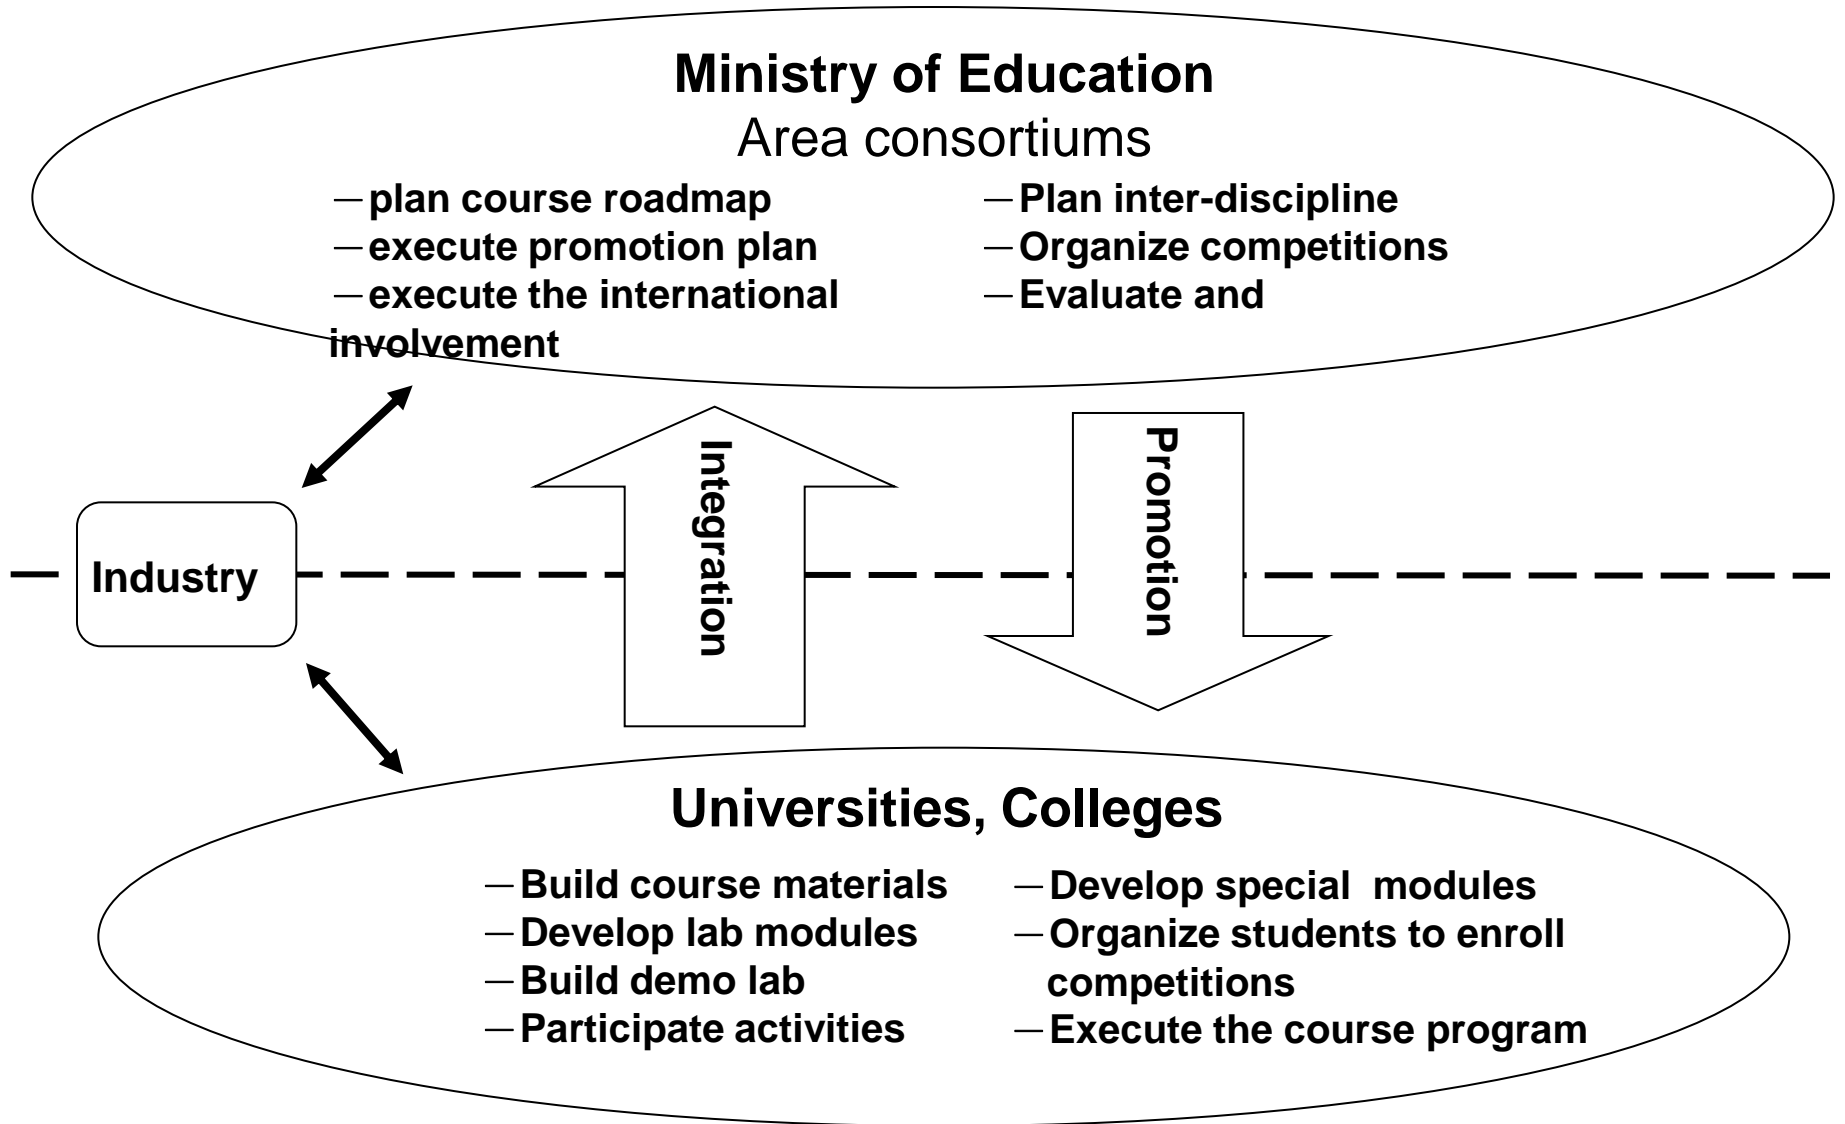

- Working with heterogeneous system integration, particularly aims to develop core capability across multiple disciplines

# National Program for Promoting Education in Advanced SoC Design

# Execution Strategies

# A centralized site for course materials

- So far, we collect 106 course materials and 35 lab modules
- Currently 710 users registered and 4,793 downloads

# Course promotion and deployment

# Additional activities

1. Each area consortium performed on-site reviews and visited totally 127 departments in all of the universities.
  - Each review not only evaluated the program results in terms of teaching quality, student learning, and final projects,
  - but also collected many interesting and valuable user experiences for those course roadmap.
2. Develop a across-field course—“**Advanced Patent Search and Application**” to attract more attentions in patent search and acquirements. The course attract more than 1800 students each year.
3. Develop—“**Embedded System Product Design**” to train students hands-on experiences by learning:
  - Create innovative ideas,
  - Develop product and real implementation
  - Prepare business plan for the promotion

# Student competition

## Organize domestic competitions

- CAD competition
- Embedded System(ESW)
- IC design contest

# Student competition - CAD

## Computer Aided Design in integrated circuit

1. A competition combining software and hardware knowledge
2. Question sets are announced 6 months before the contest
3. Competition is based two categories: open topics and given-questions. Fixed questions are given by domestic major companies in electronics design automation.
4. The winners are subsidized to participate international conferences and design contests.
5. Taiwan students won 『International ACM SIGDA CADathlon at ICCAD design contests』 1<sup>st</sup> place: twice, 2<sup>nd</sup> place: twice, and the 4<sup>th</sup> place

# Student competition - CAD

## Number of teams enrolled in 2005~2009

Competition site

- Non-specific problem
- Marathon
- Specific problem

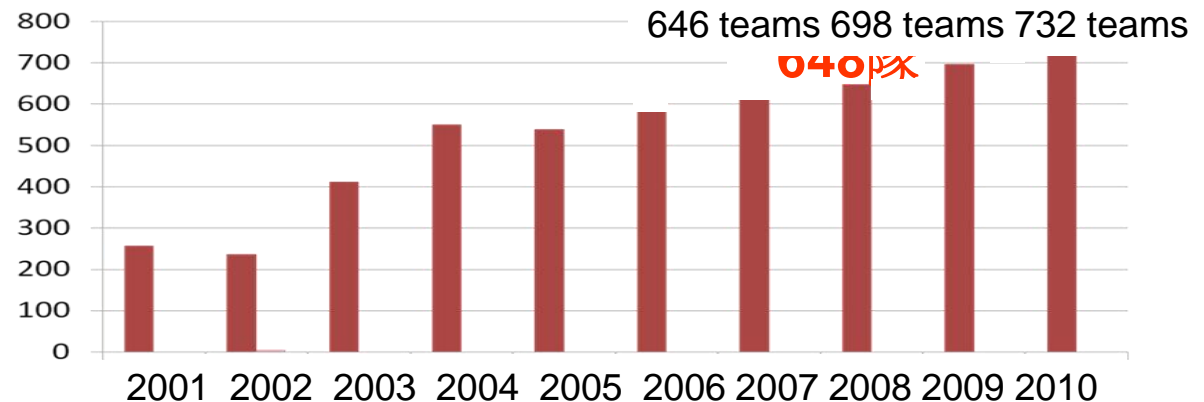

Referee meeting

# IC Design Contest

1. Supported by CIC (NSC chip implementation center)
2. Students have to go through a complete design flow from RTL design, logic synthesis, layout, and place&route.
3. Design contest is organized in one day from 8:30am until 20:30pm.
4. The contest includes 5~7 categories: college layout design, analog circuit design, full-custom IC design, cell-based IC design, and FPGA.

Total 1464 students participation

# IC design competition

# Embedded system competition

1. A system design contest emphasizes on software and hardware integration:

- Embedded system software
- Open-source design
- Innovative embedded system
- HW/SW integration

2. The contest is open to public for the whole day. Students exchange their experience and learn from others.

3. Several board platforms are provided by domestic companies and system industry.

| Service promotion workshop | High speed PCB workshop | Training the trainer workshop | proposal | PCB board |
|----------------------------|-------------------------|-------------------------------|----------|-----------|
| 12                         | 3                       | 2                             | 3        | 18        |

# Summary

- National-wide teaching quality in IC and SoC design is significantly improved. More students are attracted to join this area.
- More advanced designs are carried out and more papers are accepted in prestigious conferences.
- More collaborations are enabled among academic universities, research institutes, and the industry.
- Attract many international visits to learn the successful story

# Intelligent Electronics Education Program in Taiwan (2011-2016)

# Embedded System Education Program (2004-2010)

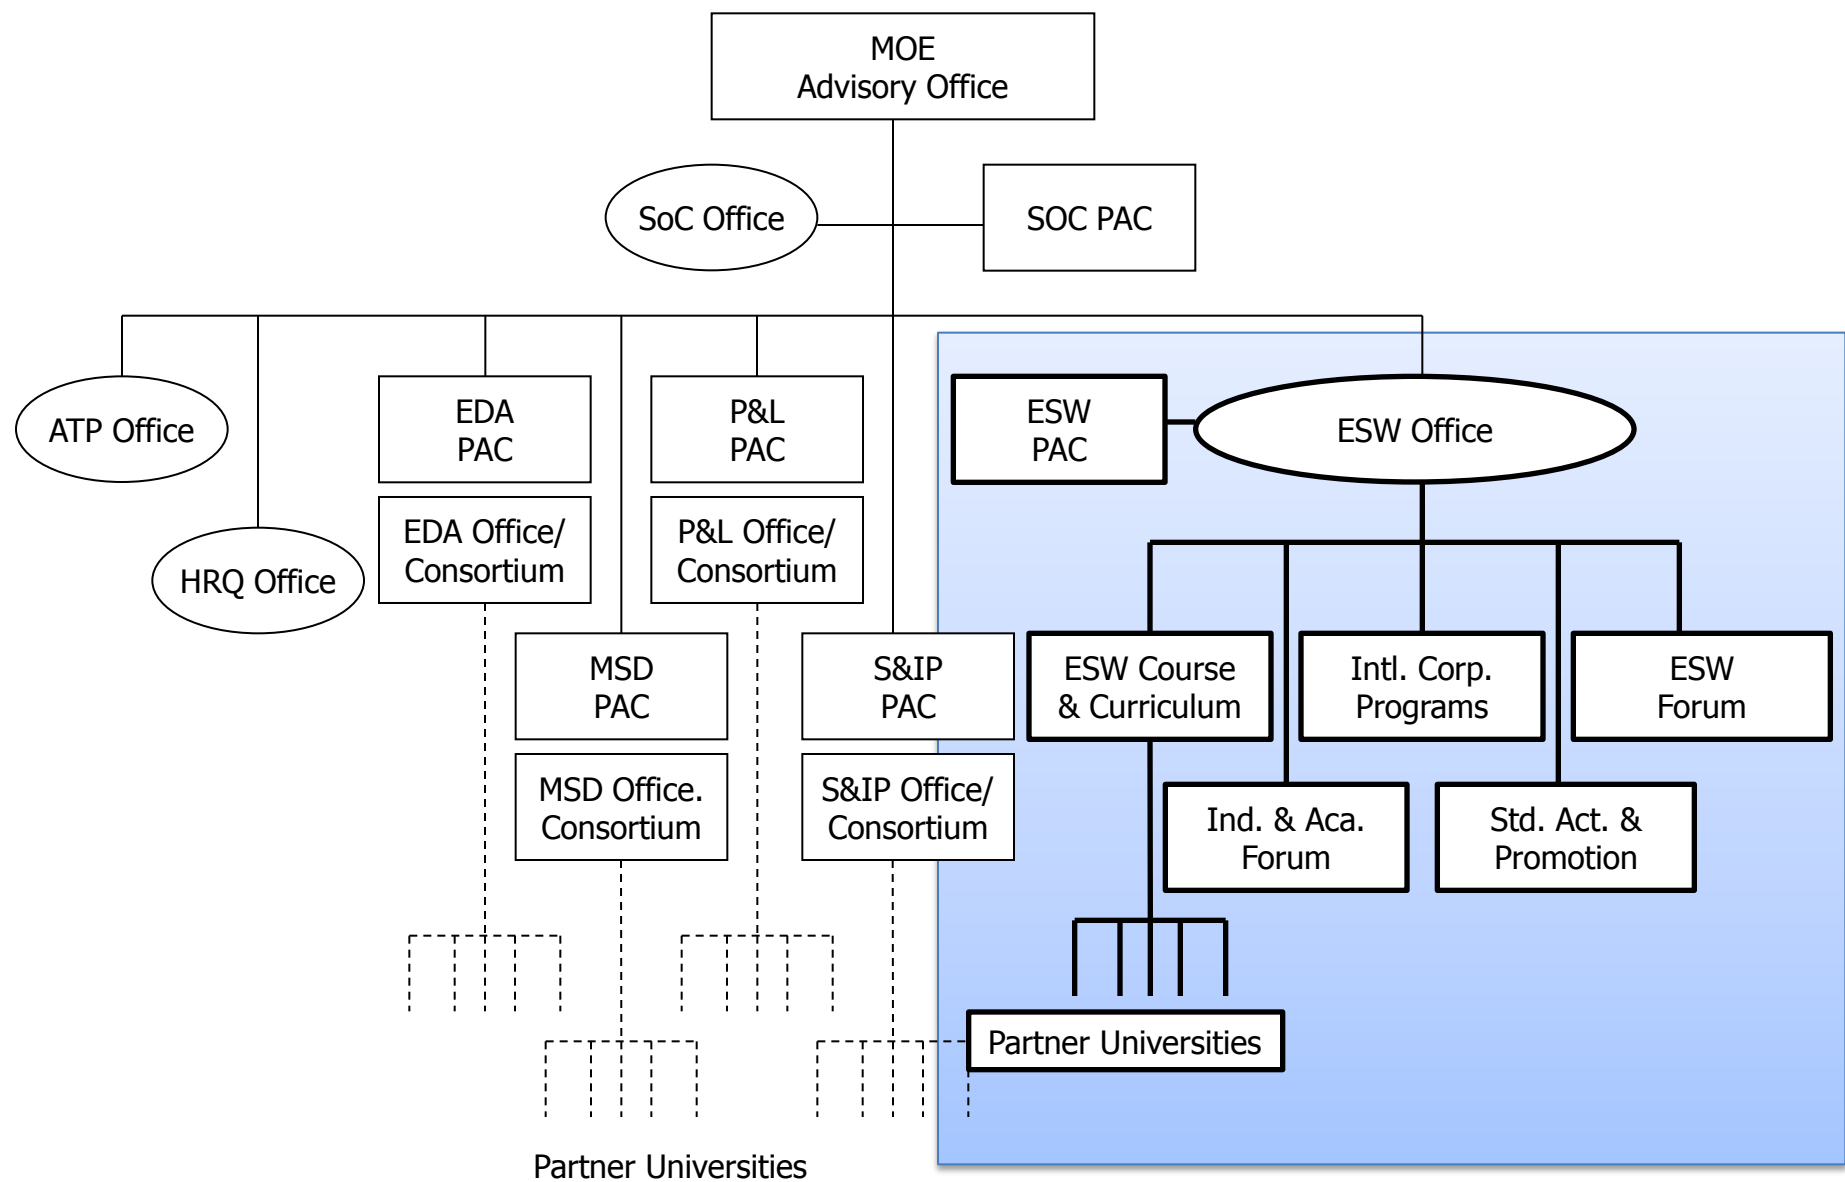

# Previous SoC and Embedded System Education Promotion Program (2004-2010)

## ■ Embedded System Consortium

- The last (but not least) consortium founded by the MOE under the VLSI/SoC CSE Program
- Address the challenges of embedded software development for SoC systems
- Chairs of Embedded System Consortium
  - Prof. Youn-Long Steve Lin, 2004-2006
  - Prof. Chung-Ta King, 2006-2008
  - Prof. Jenq-Kuen Lee, 2008-2010

# MOE/VLSI Program/ESW Consortium

## ESW Consortium Activities

- Technical forum
  - 9 workshops/1328 attendees/2006-2010
- Training the trainer workshop
  - 18 workshops/1142 profs/TAs/2006-2010
- Summer camp
  - 100 undergraduates/2008, 2010
- International forum
  - 8 workshops/1158 attendees/2006-2010
- Industrial forum
  - 12 workshops/838 attends/2006-2010

# ESW Consortium Activities

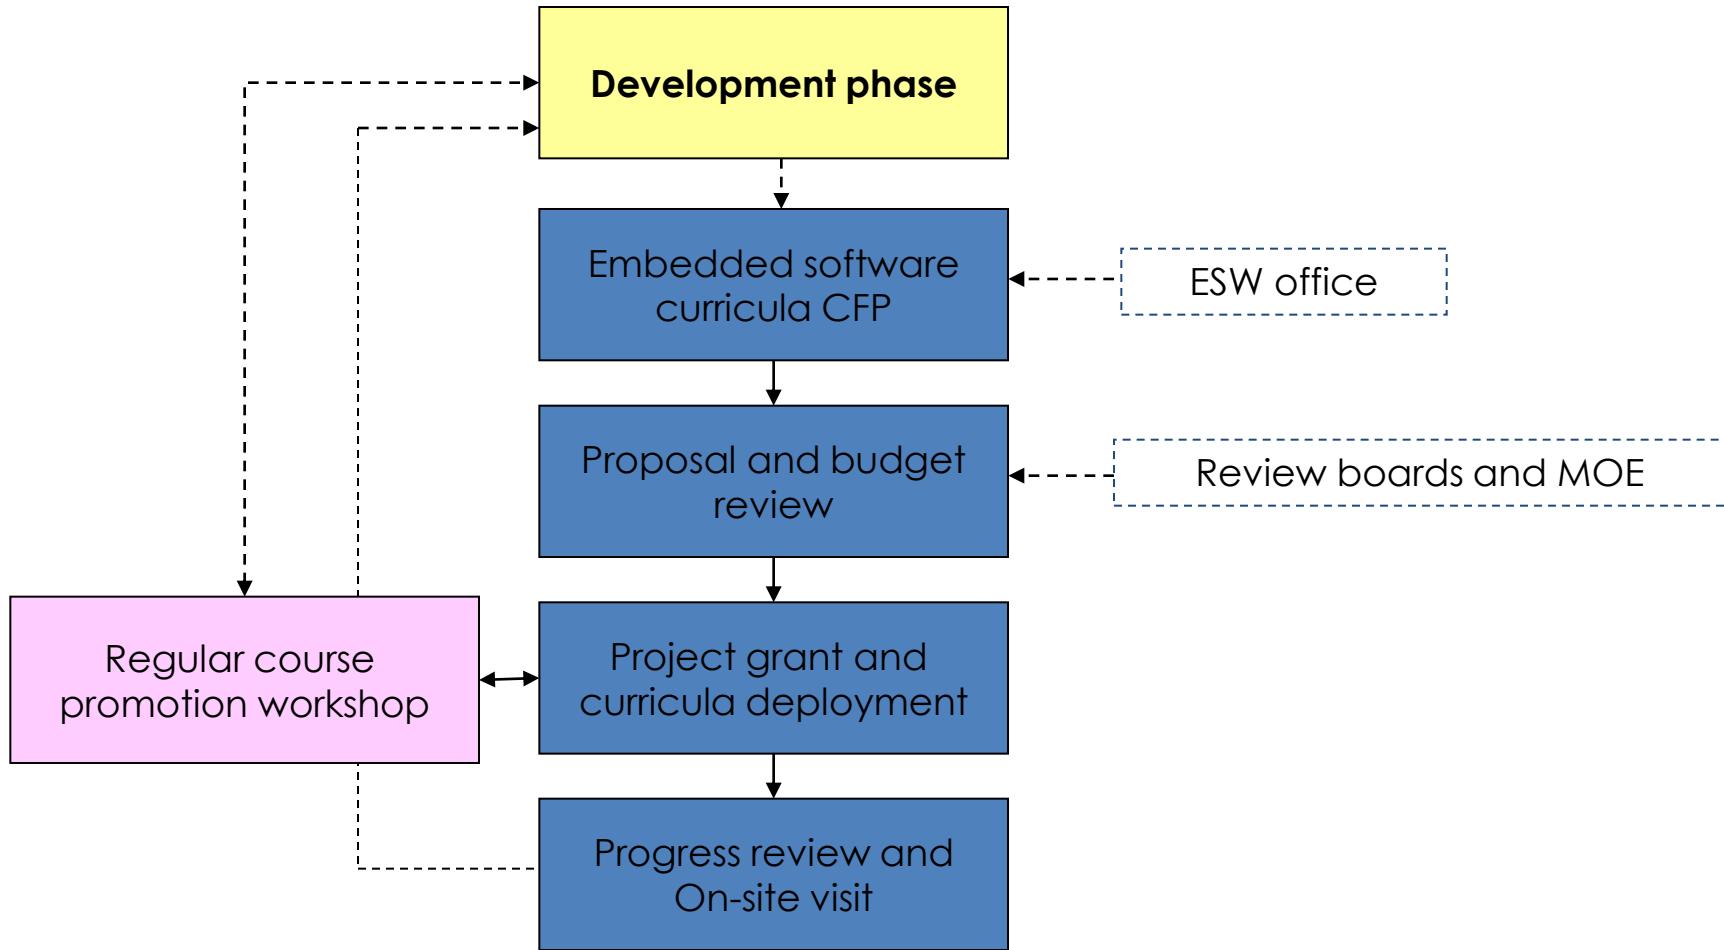

## ■ ESW Curriculum

### ■ Develop reference ESW curricula for universities

- Develop or enhance courseware including Labs for ESW courses
- Promote ESW curricula for CS/EE depts

# Embedded software curricula

## ■ Universities

- train students with research, design and development abilities

## ■ Technical universities

- offer trainings to students with technical skills and implementation abilities

## Results and experiences

- 17 courses/8 modules/2684 students enrolled
- Course development projects
  - about total USD 50,000-100,000 for the course development
  - total USD 15,000 per year for maintenance
- 71 professors from more than 26 universities involve the course development
  - 40% professors are from EE and related departments
  - 60% professors are from the CS department

# Results and experiences

- Each course development project
  - 200-500 slides/notes
  - Some projects published textbooks
  - 4-15 hands-on labs/TA-notes
- Number of courseware download
  - 2371 download (2007-2010)

## Results and experiences (Cont.)

- Curricula promotion workshops every year
  - more than 800 attendees including professors, students, and engineers from industries
  
- Received >200 proposals and approved >140 proposals from 2005-2010
  - About USD 10,000 to 100,000 is funded for the first year

## Results and experiences (Cont.)

- ESW education infrastructures have been established in more than 30 universities
  - > 2000 students enrolled these courses under the ESW curricula deployment program

# Results and experiences (Cont.)

## ■ Challenges and issues

- the common education platform
  - to develop different sets of hands-on labs over various platforms
  - require all hands-on labs to be developed over one or two common hardware platforms
- the development of hands-on labs
  - TA notes, reference source codes or reports, and knowledge and experiences learned from the labs are extremely important

---

## Results and experiences (Cont.)

- **Establish a database for hands-on labs**
  - Lab road map
  - >100 labs
  - peer review

## Microsoft Reveals Imagine Cup 2011 Winners, Unveils \$3 Million Grant Program

Winning student projects hail from Bangladesh, Brazil, Denmark, France, Greece, India, Italy, Japan, Korea, Mexico, Poland, Romania and Taiwan.

101 96 Share 31 Email

**July 13, 2011** — Microsoft Corp. today announced the winners of the ninth annual Microsoft Imagine Cup, the world's premier student technology competition, honoring student innovations that address global problems such as improving road and fire safety, eradicating poverty, and creating a more sustainable environment. The company also unveiled plans to launch a three-year, \$3 million competitive grant program to help recipients realize their vision of solving the world's toughest problems.

"The innovators, entrepreneurs and humanitarians who compete in the Imagine Cup have developed an inspiring spectrum of projects, raising the bar higher and higher each year," said S. Somasegar, senior vice president, Developer Division, Microsoft. "We are in awe of the students' solutions for addressing social and real-world challenges, and want to help them take their projects to the next level with the financial, technical and business support they need to change the world."

# Key working items in new education program

- A common teaching platform
- Construct a complete Lab database
- Need top-down (system-view) curriculum design

# 4C Electronics (4C) Education Program (2011-2016)

## Basics of 4C Electronics (4C) Education Consortium

- Sponsored by Ministry of Education
- Chair of 4C electronics
  - Prof. Tien-Fu Chen
- Project period from 2011 to 2016
  - 1<sup>st</sup> stage 2011 to 2014
- Budget
  - Curriculum/education key lab development: USD 500,000/year
  - Curriculum/education key lab promotion: > USD 1,000,000/year
- >15 universities/30 profs. involved

## Objectives

- Promote 4C Electronics (4C) education in Taiwan
- Top-down: train EE/CS talents with system-level design views
- Bottom-up: identify key technologies/IPs in future 4C IC/IT products

## Approaches

- Develop and promote curriculum and lab in 4C key areas
  - Interdisciplinary/System/applications/common education platform

Innovative  
Interdisciplinary  
System design

Hands-on projects/key labs

Interdisciplinary course

IC core courseware

Key areas

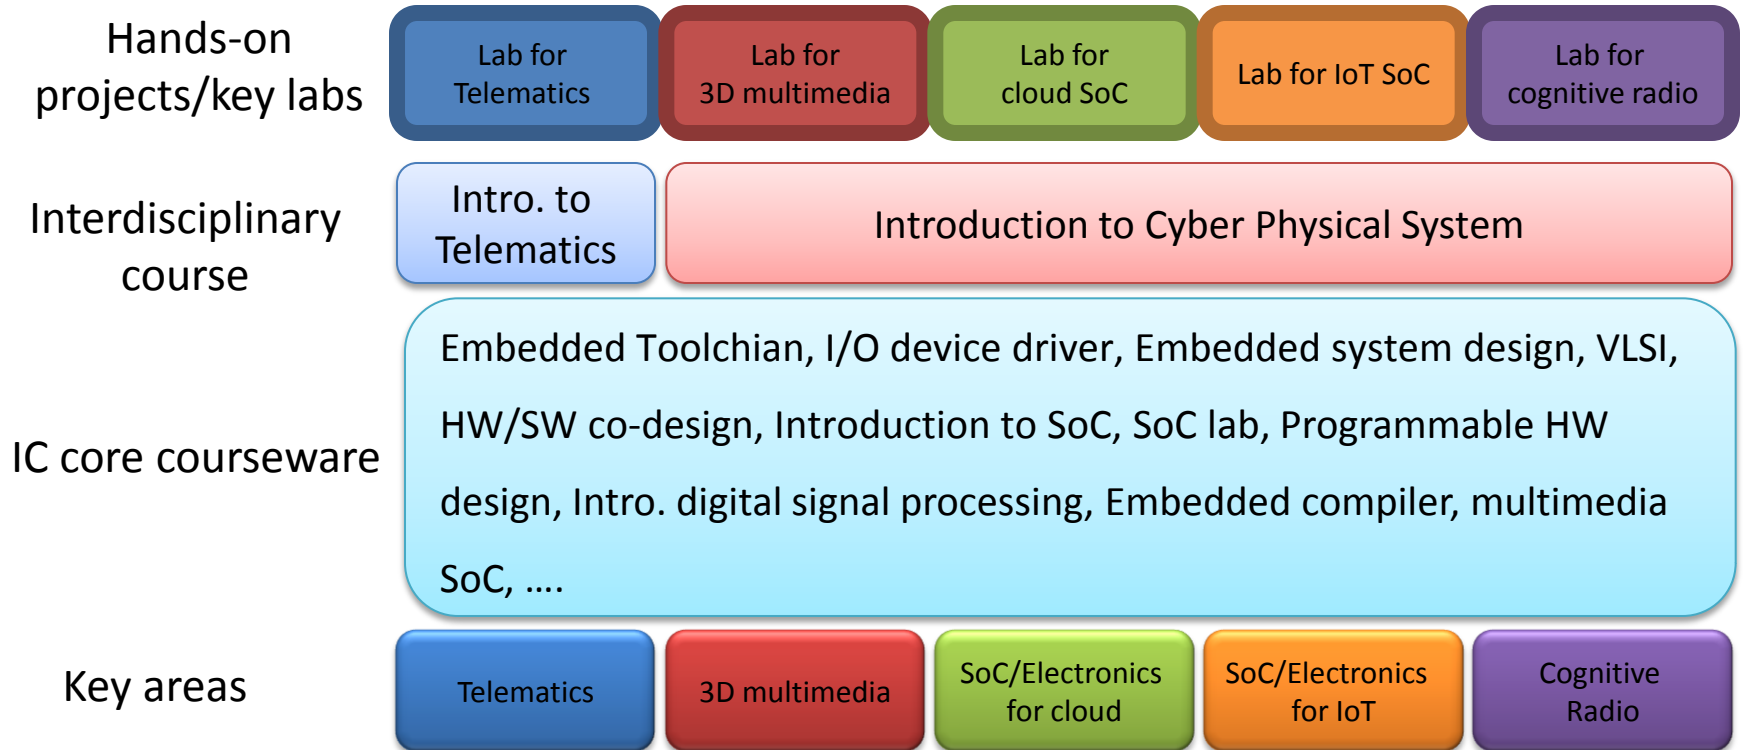

Key technologies/IPs

## Approaches

- Identify 5 important 4C key areas (application specific, top-down system view)
- Propose curriculum for each key area (based on what we have developed during past 10 years)
- Design an interdisciplinary course for each key area
- Design a common education platform for each key area (can be used in all courses in each key area)
- Design an application-specific hands-on course for each key area
- Help university to establish the education lab in key area

# Curriculum and labs

## Platform and hands-on lab

- Reproducible, maintainable, common education platform for each key area
- Develop hands-on labs for each key area and its database
  - Lab notes
  - Hardware/software packages
  - TA notes
  - References
  - Student reports
  - Discussion forum

# Common platform for Telematics

## ● Panda board

# Common platform and lab for Telematics

## ■ Hardware platform

多鏡頭視訊擷取裝置  
(USB Camera)

中控顯示裝置  
(LCD Monitor)

儲存裝置  
(SD Card)

中控運算平台  
(OMAP4430 on PandaBoard)

# Common platform and lab for Telematics

# Common platform and lab for cognitive radio

## Avnet TI OMAP/Spartan-6 FPGA

## Summary

- VLSI Circuit and Systems/SoC Education Program in Taiwan (2000-2010)
- Intelligent Electronics Education Program in Taiwan (2011-2016)
- Embedded System Education Program (2003-2010)
- 4C Electronics (4C) Education Program (2011-2016)
